REPORTED:

Test Name	Result	Flag	Reference Range	Lab
QUANTIFERON(R)-TB GOLD				
QUANTIFERON(R)-TB GOLD	NEGATIVE		NEGATIVE	KS
Negative test result. M. tuberculosis complex infection unlikely.				
NIL	0.07		IU/mL	KS
MITOGEN-NIL	>10.00		IU/mL	KS
TB-NIL	0.00		IU/mL	KS
<p>The Nil tube value is used to determine if the patient has a preexisting immune response which could cause a false-positive reading on the test. In order for a test to be valid, the Nil tube must have a value of less than or equal to 8.0 IU/mL.</p> <p>The mitogen control tube is used to assure the patient has a healthy immune status and also serves as a control for correct blood handling and incubation. It is used to detect false-negative readings. The mitogen tube must have a gamma interferon value of greater than or equal to 0.5 IU/mL higher than the value of the Nil tube.</p> <p>The TB antigen tube is coated with the M. tuberculosis specific antigens. For a test to be considered positive, the TB antigen tube value minus the Nil tube value must be greater than or equal to 0.35 IU/mL.</p> <p>For additional information, please refer to http://education.questdiagnostics.com/faq/QFT (This link is being provided for informational/educational purposes only.)</p>
