Test Name	Result	Flag	Reference Range	Lab
-----------	--------	------	-----------------	-----

### CYTOMEGALOVIRUS ANTIBODY (IGM)

CYTOMEGALOVIRUS ANTIBODY (IGM)	<0.2			01
--------------------------------	------	--	--	----

Value	Interpretation
-------	----------------

-----

< or = 0.8 No Antibody Detected

0.9 - 1.0 Equivocal

> or = 1.1 Antibody Detected

Results from any one IgM assay should not be used as a sole determinant of a current or recent infection. Because an IgM test can yield false positive results and low level IgM antibody may persist for more than 12 months post infection, reliance on a single test result could be misleading. Acute infection is best diagnosed by demonstrating the conversion of IgG from negative to positive. If an acute infection is suspected, consider obtaining a new specimen and submit for both IgG and IgM testing in two or more weeks.
