Test Name	Result	Flag	Reference Range	Lab
HEPATITIS B SURFACE ANTIBODY (QUANT)				
HEPATITIS B SURFACE ANTIBODY (QUANT)	69		mIU/mL	CB
Patient has immunity to hepatitis B virus.				
This test was performed using the Siemens chemiluminescent method effective November 21, 2013. Quantitative values from the previous Ortho Vitros method should not be used interchangeably.				
RUBELLA IMMUNE STATUS				
RUBELLA ANTIBODY (IGG)	3.89			CB
	Value	Interpretation		
	-----	-----		
	< or = 0.90	Negative		
	0.91-1.09	Equivocal		
	> or = 1.10	Positive		
The presence of rubella IgG antibody suggests immunization or past or current infection with rubella virus.				
VARICELLA ZOSTER VIRUS ANTIBODY (IGG)				
VARICELLA ZOSTER VIRUS ANTIBODY	1.50		index	CB
	Index	Explanation of Results		
	-----	-----		
	< or = 0.90	Negative - No VZV IgG Antibody detected		
	0.91 - 1.09	Equivocal		
	> or = 1.10	Positive - VZV IgG Antibody detected		
A positive result indicates that the patient has antibody to VZV but does not differentiate between infection (active or past) and vaccination. The clinical diagnosis must be interpreted in conjunction with the clinical signs and symptoms of the patient. This assay reliably measures immunity due to previous infection but may not always be sensitive enough to detect antibodies induced by vaccination. Thus, a negative result in a vaccinated individual does not necessarily indicate susceptibility to VZV infection.				
MEASLES ANTIBODY (IGG)				
MEASLES ANTIBODY (IGG)	1.99		index	CB
	Index	Explanation of Test Results		
	-----	-----		
	< or = 0.90	Negative - No Rubeola (Measles) IgG Antibody detected		
	0.91 - 1.09	Equivocal		
	> or = 1.10	Positive - Rubeola (Measles) IgG Antibody detected		
Positive results suggest recent or previous infection				

Sample results. Actual results may vary.

with Measles (Rubeola) virus and imply immunity.
Patients exhibiting equivocal results should be
retested in one month, if clinically indicated.

MUMPS VIRUS ANTIBODY (IGG)

MUMPS VIRUS ANTIBODY (IGG) 2.55 index CB

Index Interpretation

< or = 0.90 Negative

0.91-1.09 Equivocal

> or = 1.10 Positive

A positive result indicates that the patient has antibody
to mumps virus. It does not differentiate between an
active or past infection. The clinical diagnosis must
be interpreted in conjunction with the clinical signs
and symptoms of the patient.
