<p>This assay utilizes recombinant type-specific antigens to differentiate HSV-1 from HSV-2 infections. A positive result cannot distinguish between recent and past infection. If recent HSV infection is suspected but the results are negative or equivocal, the assay should be repeated in 4-6 weeks. The performance characteristics of the assay have not been established for pediatric populations, immunocompromised patients, or neonatal screening.</p>				
HIV AB, HIV 1/2, EIA, WITH REFLEXES				
HIV 1/2 EIA AB SCREEN	NON-REACTIVE		NON-REACTIVE	01
<p>A Nonreactive HIV 1/2 antibody result does not exclude HIV infection since the time frame for seroconversion is variable. If acute HIV infection is suspected, HIV-1 RNA TMA Qualitative (16185) testing is recommended.</p>
