REPORTED:

Test Name	Result	Flag	Reference Range	Lab
<b>HEPATITIS B SURFACE ANTIGEN W/REFL CONFIRM</b>				
HEPATITIS B SURFACE ANTIGEN	NON-REACTIVE		NON-REACTIVE	TP
CONFIRMATION	DNR			TP
<b>HEPATITIS C ANTIBODY</b>				
HEPATITIS C ANTIBODY	NON-REACTIVE		NON-REACTIVE	TP
SIGNAL TO CUT-OFF	0.01		<1.00	TP
<b>HSV 1/2 IGG,TYPE SPECIFIC AB HERPESELECT</b>				
HSV 1 IGG TYPE SPECIFIC AB	>5.00	HIGH		TP
HSV 2 IGG TYPE SPECIFIC AB	0.11			TP
	Value	Interpretation		
	-----	-----		
	<0.90	Negative		
	0.90-1.10	Equivocal		
	>1.10	Positive		
<p>This assay utilizes recombinant type-specific antigens to differentiate HSV-1 from HSV-2 infections. A positive result cannot distinguish between recent and past infection. If recent HSV infection is suspected but the results are negative or equivocal, the assay should be repeated in 4-6 weeks. The performance characteristics of the assay have not been established for pediatric populations, immunocompromised patients, or neonatal screening.</p>				
<b>HIV AB, HIV 1/2, EIA, WITH REFLEXES</b>				
HIV 1/2 EIA AB SCREEN	NON-REACTIVE		NON-REACTIVE	TP
<p>A Nonreactive HIV-1/2 antibody result does not exclude HIV infection since the time frame for seroconversion is variable. If acute HIV infection is suspected, antibody retesting and nucleic acid amplification (HIV DNA/RNA) testing is recommended.</p> <p>Effective April 28, 2014, Quest Diagnostics will discontinue the HIV-1 Western Blot confirmation and replace it with an HIV-1/HIV-2 differentiation assay. This assay exhibits increased sensitivity over the HIV-1 Western Blot test and simultaneously differentiates HIV-1 antibody reactivity from HIV-2 antibody reactivity.</p>				
<b>CHLAMYDIA/N. GONORRHOEAE RNA, TMA</b>				
CHLAMYDIA TRACHOMATIS RNA, TMA	NOT DETECTED		NOT DETECTED	TP
NEISSERIA GONORRHOEAE RNA, TMA	NOT DETECTED		NOT DETECTED	TP
COMMENT				TP
