

Patient Information	Specimen Information	Client Information
	Collected: 04/21/2020 / 12:14 PDT Received: 04/22/2020 / 01:59 PDT Reported: 04/23/2020 / 05:21 PDT	

Test Name	In Range	Out Of Range	Reference Range	Lab
SARS CoV 2 SEROLOGY				TXC
(COVID 19) AB (IGG), IA				
SARS CoV 2 AB IGG		NEGATIVE		
REFERENCE RANGE:	NEGATIVE			

Detection of IgG antibodies may indicate exposure to SARS-CoV-2 (COVID-19). It usually takes at least 10 days after symptom onset for IgG to reach detectable levels. An IgG positive result may suggest an immune response to a primary infection with SARS-CoV-2, but the relationship between IgG positivity and immunity to SARS-CoV-2 has not yet been firmly established. Antibody tests have not been shown to definitively diagnose or exclude SARS-CoV-2 infection. Diagnosis of COVID-19 is made by detection of SARS-CoV-2 RNA by molecular testing methods, consistent with a patient's clinical findings.

This test has not been reviewed by the FDA. Negative results do not rule out SARS-CoV-2 infection particularly in those who have been in contact with the virus. Follow-up testing with a molecular diagnostic should be considered to rule out infection in these individuals. Results from antibody testing should not be used as the sole basis to diagnose or exclude SARS-CoV-2 infection or to inform infection status. Positive results could also be due to past or present infection with non-SARS-CoV-2 coronavirus strains, such as coronavirus HKU1, NL63, OC43, or 229E. This test is not to be used for the screening of donated blood.
